Professional Experience

Postman, Working Remotely

February 2022 – Present

Technical Lead

- Leading the development of Postman's next runtime, the core that powers all of Postman. Executes collections and requests of all types using a plugin-driven approach that makes it simple to add new low-level functionality to Postman, while reliably sending 100+ million requests every week
- Led the development of Postman's new GraphQL client, building an advanced query builder, schema documentation and explorer, and fast schema search that integrated as simple and useful tooling for end users
Presented "Building Tooling That Speaks GraphQL" at GraphQLConf 2023
- Created a foundation of accessible, composable, and reusable components and systems that are applied to multiple workbenches, including HTTP, gRPC, and GraphQL
- Implemented improvements to the first time user flow to simplify and beautify the landing screen, demonstrate the benefits of signing up, and smooth the sign up experience that led to 50,000 more users signing up every week
- Modeled complex interactions in React using state machines, context, signals, and other advanced state management approaches

Capital One, Richmond, VA

July 2019 – February 2022

Master Software Developer

- Tech Lead driving the architecture and design of UI products for enterprise payments used across Capital One
- Ensured the product and technical design smoothly grew from a small team to multiple teams working in parallel while keeping the product, and teams that built it, performant and reliable
- Developed a backend system with GraphQL that intelligently spread complex queries across multiple systems, including PostgreSQL, Elasticsearch, and REST endpoints

Senior Software Developer

- Developed reusable components and tooling as part of the Design System team that supported the entire Commercial organization within Capital One
- Discovered common patterns and needs from community feedback and suggestions, created accessible components in Angular and React, and ensured they were well-documented, tested, and useful before releasing them to the organization

Cornerstone Systems NW, Working Remotely

May 2013 – June 2019

Software Developer

- Work collaboratively as part of a remote team of developers on large React, d3, and Backbone.js applications, developing advanced systems that condense information and tasks into focused, simple interfaces
- Lead a developer experience initiative that unified and modernized internal build tooling, testing, and development processes to aid sharing across teams, improve code quality, and increase iteration speed
- Create composable and configurable charting system that dramatically simplifies the process of creating new visualizations and allows rapid iteration of chart design and layout
See d3-composer for details: <https://github.com/CSNW/d3-composer>
- Design and build an asynchronous data layer for working with csv data, including querying, caching, and advanced processing
- Create a reusable component library with React, Backbone, and d3 components for bootstrapping new projects and sharing best practices
